

Hydrodomus

Pre-Seed Financing Plan: Sourced Use of Funds

August 2026 (rev. 2) · Founder: Yannick Durindel · Confidential

This document itemizes the capital required to take Hydrodomus from its current bench-scale proof of concept to two demo-grade pilot units capable of a live, safe compressed-hydrogen refueling demonstration for a prospective OEM partner, alongside the intellectual-property and compliance work running in parallel. Every figure is sourced from a named reference where public pricing exists; items without public pricing are explicitly flagged as requiring a direct vendor quote before being treated as final.

Intellectual Property (Year 1, Single CPI Engagement)

One CPI handles both FR prosecution and PCT filing as a single engagement, cheaper than two separate attorney relationships, since the PCT filing reuses the FR specification.

Item	Cost
INPI: convert FR provisional to full application (PME reduced rate)	€318
Single CPI (FR drafting/prosecution + PCT filing, bundled)	€3,200 – €5,500
PCT filing (official fees, WIPO + EPO search)	€3,000 – €3,500
Trademark (INPI official fee, 5 classes)	€350
Trademark (agent fee & prior-art search)	€800 – €2,000
Year-1 IP subtotal	€7,700 – €11,700

Source: INPI official tariff schedule (inpi.fr); WIPO PCT fee schedule (wipo.int); deposer-brevet.com, yesmy-patent.com CPI fee benchmarks.

National phase filing (deferred to ~mid-2028, not part of the near-term ask):

Country / Route	Total estimate
Germany + UK (EPO regional phase, London Agreement, no translation)	€4,000 – €6,000
USA	\$10,000 – \$15,000
Japan	\$10,000 – \$14,000
South Korea <i>[weakly sourced]</i>	\$5,000 – \$10,000
China (bonus: manufacturing/supply-chain relevance)	\$8,000 – \$12,000
National phase total (due ~mid-2028)	€34,000 – €53,000

Source: Mewburn (London Agreement); USPTO fee schedule; JPO / Evorix Japan cost guide; Korean patent translation rate guides; MadePatents, Teak IP international filing cost guides.

Hardware: Pilot Program (2 Units + Demo Vehicle)

Component	Cost (2 units unless noted)
PEM electrolyzer stack (2–3 kW)	€4,000 – €11,000
700 bar H ₂ -rated compressor <i>[founder-sourced]</i>	€20,000
Type IV composite tank, <10L, 700–875 bar <i>[estimate]</i>	€6,000 – €9,000
SAE J2601 / ISO 17268 fueling nozzle <i>[estimate]</i>	€10,000 – €30,000
Used FCEV for live demo (Toyota Mirai, EU market, ×1)	€15,000 – €20,000
Bare component subtotal	€55,000 – €90,000
+ integration, enclosure, controls (self-build)	+€10,000
Hardware total	€65,000 – €100,000

Source: DOE PEM electrolyzer cost record; Hydr-Star AGB06-1T booster pump listing (made-in-china.com, real posted price \$5,033/unit); internal Product/V1 two-stage compressor research; DOE hydrogen storage system cost analysis; AutoScout24 EU listings (Toyota Mirai).

Compressor cost is the founder's figure from direct supplier conversations, corroborated by a real posted price for a comparable-class hydraulic booster pump and by internal two-stage compressor research (Rejool/Sauer/Coltri to ~300 bar + Haskel/Maximator/GRZ/SITEC booster to 700 bar, booster stage costed internally at €5,000–12,000). More reliable than the earlier cold market scan, still short of a written quote; an RFQ remains the next concrete step.

Certification & Regulatory Compliance

Item	Cost
HAZOP study	€10,000 – €20,000
LOPA / SIL determination <i>[unverified]</i>	€5,000 – €10,000
ATEX Zone 2 / Category 2G-3G certification	€5,000 – €14,000
Demo-relevant subtotal	€20,000 – €44,000
ISO 22734 certification/testing <i>[quote pending]</i>	€20,000 – €50,000
PED Category IV conformity assessment <i>[quote pending]</i>	€100,000+
Full Phase 2–3 certification stack (add.)	+€120,000 – €300,000+

Source: OTECSA HAZOP cost benchmark (UK); TÜV SÜD ISO 22734 accreditation notice; PED Category IV conformity-assessment cost guide; Intrinsically Safe Store ATEX certification cost 2026.

ISO 22734 and PED are required for commercial sale, not for a private OEM demonstration; shown as the Phase 2–3 follow-on cost. Product liability insurance for a live compressed-hydrogen demo should be confirmed with a broker early: coverage availability, not just cost, may be the real constraint.

Team

Role	Annual cost
Engineer #1 (France, budgeted total cost to company)	€100,000
Engineer #2 (France, budgeted total cost to company)	€100,000
Founder living cost <i>[founder-sourced]</i>	€50,000
Team + founder subtotal	€250,000

Per engineer, at a €100,000 fully-loaded budget: implied gross salary ~€70,400–74,100 (employer charges 35–42%)

for a cadre), net take-home after all charges and income tax ~€42,000–47,000/year for a single filer. Founder living cost is a direct founder figure, not re-derived through payroll math this round; if drawn as SAS président compensation, actual payroll cost may run somewhat higher under the assimilé-salarié social-charge regime (not separately sourced). Source: Dougs.fr and PayFit employer-charge benchmarks; standard French cadre payroll structure.

Other Operating Costs

Item	Cost
Corporate / legal (SAS structure, advisor & shareholder docs)	€2,000 – €5,000
Travel (OEM meetings)	€3,000 – €6,000
Working capital / spares / contingency	€5,000 – €10,000
Subtotal	€10,000 – €21,000

Use of Funds: Summary

Category	Low	High
Intellectual property (year 1)	€7,700	€11,700
Hardware (2 pilot units + demo vehicle)	€65,000	€100,000
Certification (demo-relevant only)	€20,000	€44,000
Team (2 engineers, 1 year)	€200,000	€200,000
Founder living cost, 1 year	€50,000	€50,000
Other operating costs	€10,000	€21,000
Total (founder + 2 engineers + living cost)	€352,700	€426,700
Reference (founder alone, no draw)	€102,700	€176,700

Addenda, not in the totals above: +€34,000 – €53,000 for PCT national phase entry (Germany+UK, USA, Japan, South Korea, China), due ~mid-2028. +€120,000 – €300,000+ for the full ISO 22734 + PED certification stack, if pursued alongside the demo rather than deferred.

Figures compiled from public vendor pricing, official fee schedules, named industry benchmarks, and founder-sourced supplier conversations as of August 2026 (rev. 2). Items marked *[quote pending]*, *[estimate]*, or *[founder-sourced]* require a direct vendor quote before being treated as final. Full source list with URLs available on request.
