

Hydrodomus

Investor Update — February 2026

Confidential · March 6, 2026

Highlights

In February, we reached out to several electrolyzer suppliers and deepened our understanding of the different hydrogen production methods — a critical step in making the right technology choice. This allowed us to estimate a target system cost of around 5k€ at scale (high-volume production, not a single unit). By mapping all the components required in the final product, we then selected smaller, more affordable equivalents suited for a prototype. We ended up with a ~500€ prototype bill of materials, which we have ordered and aim to have fully assembled by the end of March.

Lowlights

While the feasibility looks promising, the main challenge we identified immediately is the cost of the electrolyzer: current PEM units are far too expensive for a consumer-facing installation. We are therefore exploring cheaper technologies with comparable performance, such as alkaline and AEM electrolyzers. We also believe that as the hydrogen industry matures, costs will come down significantly — meaning that building now puts us ahead of the curve.

Key Metrics

Since we have not raised any capital yet, our expenses are minimal and we cannot provide meaningful figures here. We are pre-revenue.

Metric	Value	MoM
Runway	7 months	0 %
Cash on hand	€ 3,000	0 %
MRR	€ 0	0 %
Units sold	0	0 %
Month-on-month growth	0 %	0 %

The Ask

We have not raised yet, so this update is not addressed to a specific investor. It is nonetheless a good moment to articulate what we need.

- **Introductions** — we are looking to connect with car manufacturers to validate

interest and understand procurement requirements.

- ***Deck feedback*** — *both on the investor pitch and the customer-facing version (targeting OEMs).*
- ***Capital*** — *we need funding to purchase the first electrolyzers, pumps, and ancillary components to build a full-scale prototype.*

Thank you for your continued support. Reply to this email with any questions or feedback — we read and respond to everything.
